

This is an output file of the Hi-C processing pipeline

A February 25th, 2019 at 9:17pm

Note(s)

WARNING - Due to a bug in the version of cooler (0.8.3) used in the current 4DN standard Hi-C processing pipeline some pixels may occur multiple times at a single resolution with different counts being reported for each occurrence. This duplication does not affect the high-resolution display of these files, however, downstream analyses using this file may encounter issues due to this pixel duplication. The counts from the duplicate pixels can be aggregated to determine the correct count value at that location. If this issue is problematic for your needs you should consider regenerating the matrices from the merged pairs file of the associated dataset using a more recent version of cooler. We are working to update the pipeline but do not yet have a predicted date for when this issue will be resolved.
