CONTENTS

A [Python](#) package implementing various CFA (Colour Filter Array) demosaicing algorithms and related utilities.

It is open source and freely available under the [New BSD License](#) terms.

**CHAPTER
ONE**

FEATURES

The following CFA (Colour Filter Array) demosaicing algorithms are implemented:

- Bilinear
- Malvar (2004)
- DDFAPD - Menon (2007)

INSTALLATION

Because of their size, the resources dependencies needed to run the various examples and unit tests are not provided within the Pypi package. They are separately available as [Git Submodules](#) when cloning the repository.

2.1 Primary Dependencies

Colour - Demosaicing requires various dependencies in order to run:

- Python 2.7 or Python 3.5
- Colour Science
- NumPy
- OpenImageIO

2.2 Pypi

Once the dependencies satisfied, **Colour - Demosaicing** can be installed from the [Python Package Index](#) by issuing this command in a shell:

```
pip install colour-demosaicing
```

The tests suite dependencies are installed as follows:

```
pip install 'colour-demosaicing[tests]'
```

The documentation building dependencies are installed as follows:

```
pip install 'colour-demosaicing[docs]'
```

The overall development dependencies are installed as follows:

```
pip install 'colour-demosaicing[development]'
```

3.1 API

The main reference for [Colour - Demosaicing](#) is the manual:

3.1.1 Colour - Demosaicing Manual

3.1.1.1 Reference

[Colour - Demosaicing](#)

[Demosaicing](#)

`colour_demosaicing`

<code>demoslicing_CFA_Bayer_bilinear(CFA[, pattern])</code>	Returns the demosaiced <i>RGB</i> colourspace array from given <i>Bayer</i> CFA using bilinear interpolation.
<code>demoslicing_CFA_Bayer_Malvar2004(CFA[, pattern])</code>	Returns the demosaiced <i>RGB</i> colourspace array from given <i>Bayer</i> CFA using <i>Malvar (2004)</i> demosaicing algorithm.
<code>demoslicing_CFA_Bayer_Menon2007(CFA[, ...])</code>	Returns the demosaiced <i>RGB</i> colourspace array from given <i>Bayer</i> CFA using <i>DDFAPD - Menon (2007)</i> demosaicing algorithm.

colour_demosaicing.demosaicing_CFA_Bayer_bilinear

colour_demosaicing.demosaicing_CFA_Bayer_bilinear(CFA, pattern='RGGB')

Returns the demosaiced *RGB* colourspace array from given *Bayer* CFA using bilinear interpolation.

Parameters

- **CFA** (array_like) – *Bayer* CFA.
- **pattern** (unicode, optional) – {'RGGB', 'BGGR', 'GRBG', 'GBRG'}, Arrangement of the colour filters on the pixel array.

Returns *RGB* colourspace array.

Return type ndarray

Notes

- The definition output is not clipped in range [0, 1] : this allows for direct HDRI / radiance image generation on *Bayer* CFA data and post demosaicing of the high dynamic range data as showcased in this [Jupyter Notebook](#).

```

colour_demosaicing.demosaicing_CFA_Bayer_Malvar2004

`colour_demosaicing.demosaicing_CFA_Bayer_Malvar2004(CFA, pattern='RGGB')`

Returns the demosaiced *RGB* colourspace array from given *Bayer* CFA using *Malvar (2004)* demosaicing algorithm.

Parameters

- `CFA` (`array_like`) – *Bayer* CFA.
- `pattern` (`unicode`, `optional`) – {‘RGGB’, ‘BGGR’, ‘GRBG’, ‘GBRG’}, Arrangement of the colour filters on the pixel array.

Returns *RGB* colourspace array.

Return type `ndarray`

Notes

- The definition output is not clipped in range [0, 1] : this allows for direct HDRI / radiance image generation on *Bayer* CFA data and post demosaicing of the high dynamic range data as showcased in this [Jupyter Notebook](#).

```

colour_demosaicing.demosaicing_CFA_Bayer_Menon2007

`colour_demosaicing.demosaicing_CFA_Bayer_Menon2007(CFA, pattern='RGGB', refining_step=True)`
Returns the demosaiced *RGB* colourspace array from given *Bayer* CFA using DDFAPD - *Menon (2007)* demosaicing algorithm.

Parameters

- `CFA` (`array_like`) – *Bayer* CFA.
- `pattern` (`unicode`, optional) – {‘RGGB’, ‘BGGR’, ‘GRBG’, ‘GBRG’}, Arrangement of the colour filters on the pixel array.
- `refining_step` (`bool`) – Perform refining step.

Returns *RGB* colourspace array.

Return type `ndarray`

Notes

- The definition output is not clipped in range [0, 1] : this allows for direct HDRI / radiance image generation on *Bayer* CFA data and post demosaicing of the high dynamic range data as showcased in this [Jupyter Notebook](#).

Ancillary Objects

colour_demosaicing

<code>demosaicing_CFA_Bayer_DDFAPD(CFA[, ...])</code>	pattern , Returns the demosaiced <i>RGB</i> colourspace array from given <i>Bayer</i> CFA using DDFAPD - <i>Menon (2007)</i> demosaicing algorithm.
---	---

colour_demosaicing.demosaicing_CFA_Bayer_DDFAPD

`colour_demosaicing.demosaicing_CFA_Bayer_DDFAPD(CFA, pattern='RGGB', refining_step=True)`
Returns the demosaiced *RGB* colourspace array from given *Bayer* CFA using DDFAPD - *Menon (2007)* demosaicing algorithm.

Parameters

- **CFA** (array_like) – *Bayer* CFA.
- **pattern** (unicode, optional) – {'RGGB', 'BGGR', 'GRBG', 'GBRG'}, Arrangement of the colour filters on the pixel array.
- **refining_step** (bool) – Perform refining step.

Returns *RGB* colourspace array.

Return type ndarray

Notes

- The definition output is not clipped in range [0, 1] : this allows for direct HDRI / radiance image generation on *Bayer* CFA data and post demosaicing of the high dynamic range data as showcased in this [Jupyter Notebook](#).

```

Mosaicing

`colour_demosaicing`

<code>mosaicing_CFA_Bayer(RGB[, pattern])</code>	Returns the <i>Bayer</i> CFA mosaic for a given <i>RGB</i> colourspace array.
--	---

`colour_demosaicing.mosaicing_CFA_Bayer`

`colour_demosaicing.mosaicing_CFA_Bayer(RGB, pattern='RGGB')`
 Returns the *Bayer* CFA mosaic for a given *RGB* colourspace array.

Parameters

- **RGB** (array_like) – *RGB* colourspace array.
- **pattern** (unicode, optional) – {'RGGB', 'BGGR', 'GRBG', 'GBRG'}, Arrangement of the colour filters on the pixel array.

Returns *Bayer* CFA mosaic.

Return type ndarray

Examples

```
>>> import numpy as np
>>> RGB = np.array([[[0, 1, 2],
...                   [0, 1, 2]],
...                   [[0, 1, 2],
...                   [0, 1, 2]]])
>>> mosaicing_CFA_Bayer(RGB)
array([[ 0.,  1.],
       [ 1.,  2.]])
>>> mosaicing_CFA_Bayer(RGB, pattern='BGGR')
array([[ 2.,  1.],
       [ 1.,  0.]])
```

Masks

`colour_demosaicing`

<code>masks_CFA_Bayer(shape[, pattern])</code>	Returns the <i>Bayer</i> CFA red, green and blue masks for given pattern.
--	---

`colour_demosaicing.masks_CFA_Bayer`

`colour_demosaicing.masks_CFA_Bayer(shape, pattern='RGGB')`

Returns the *Bayer* CFA red, green and blue masks for given pattern.

Parameters

- **shape** (array_like) – Dimensions of the *Bayer* CFA.
- **pattern** (unicode, optional) – {'RGGB', 'BGGR', 'GRBG', 'GBRG'}, Arrangement of the colour filters on the pixel array.

Returns *Bayer* CFA red, green and blue masks.

Return type tuple

Examples

```
>>> from pprint import pprint
>>> shape = (3, 3)
>>> pprint(masks_CFA_Bayer(shape))
(array([[ True, False,  True],
       [False, False, False],
       [ True, False,  True]], dtype=bool),
array([[False,  True, False],
       [ True, False, False],
       [False,  True, False]], dtype=bool),
array([[False, False, False],
       [False,  True, False],
       [False, False, False]], dtype=bool))
>>> pprint(masks_CFA_Bayer(shape, 'BGGR'))
(array([[False, False, False],
       [False,  True, False],
       [False, False, False]], dtype=bool),
array([[False,  True, False],
       [ True, False, False],
       [False,  True, False]], dtype=bool),
array([[ True, False,  True],
       [False, False, False],
       [ True, False,  True]], dtype=bool))
```
